Product Features

With Noah System 4, the Noah interface has been redesigned to provide dramatically improved usability, while maintaining complete compatibility with your current NOAH 3 modules and patient data created in NOAH 3. The result is a more intuitive user experience and an efficient and faster workflow.

The following is a list of the major improvements in Noah 4.

All important summary information for your patient is located on one main screen, for faster information gathering before an appointment or for answering telephone queries. Modules can also be launched from the main screen after viewing a summary audiogram, the latest devices selected and any previous Noah sessions. And the simplified session list allows easy access to previous visits with just one click.

Customization options on the Noah 4 module bar allow you to arrange manufacturer modules in the most convenient order to speed up your clinical process. Manufacturer modules are always displayed on the main screen, enabling quick access.

Each Noah module opens in its own window, allowing you to easily view open Noah modules and the Noah display simultaneously, and switch between them as with normal Windows applications.

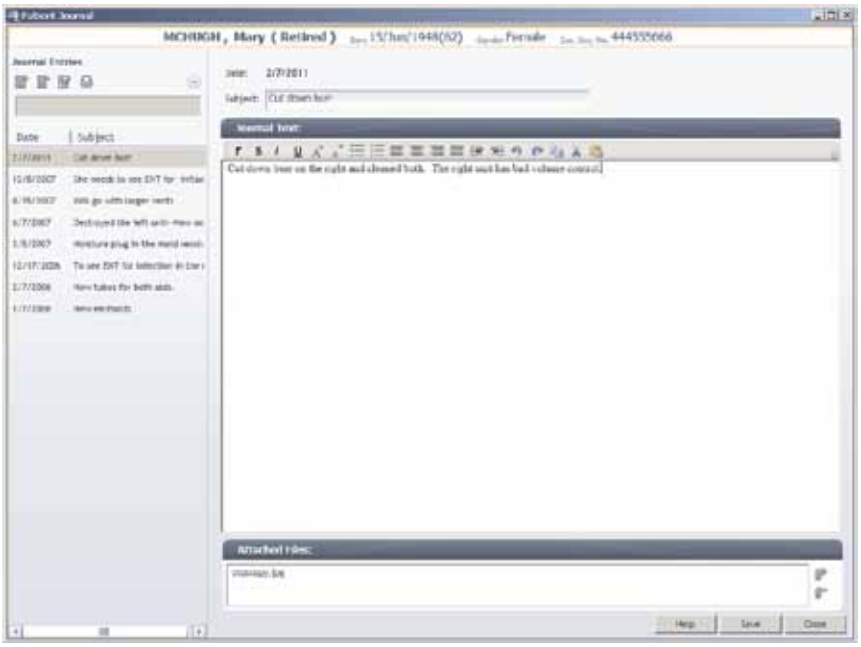
Improved searching facilities allow you to search your patient database for types of hearing loss, location, last visit to the clinic, last fitting etc. and combine these searches as required.

The Export Search Results feature enables the result of your search to be exported for use in other software.

New and streamlined reports designed for referral follow up. You can now add custom comments for each report. These comments can be saved and reused for future printed reports

Improved Journaling, with easier access to a patient's Journal, an ability to search through Journal entries, better printing capabilities and the ability to attach documents to a Journal entry.



Improved customization of the add patient page allows you to choose the data you want to collect in the order you like to collect it.

Wide Area Network support for sharing a common Noah database between locations.

Get started quicker. Modules designed specifically for Noah 4 can be opened directly from the desktop without opening Noah first.

Compatibility. Ready to work with the latest Windows operating systems and technologies.
