## What's new in Noah System 4?

Over the last few years HIMSA has added several new features to Noah System, making it quicker and easier to work with your patients and patient data.

Here are some of the great reasons to upgrade to the latest Noah System version.

### Ready to Support Noah ES

Many Noah users have been asking HIMSA for a cloud-enabled solution, accessible anytime, anywhere. That's why we started the Noah ES project.

Noah ES stands for Noah Extended Services and, as the logo implies, the project is to create a cloud-enabled version of Noah.

With Noah ES, Noah Services will now reside and be maintained in the cloud, including database backup, maintenance, security monitoring and user authentication. The Noah System client software however, will still reside on your PC, and perform in much the same way as it always has.

Although you can already see Noah ES options in Noah 4.13, you will need to wait a while before you can use it. Noah ES is currently in beta testing and is expected to be released later this year.

For more information on Noah ES, visit [www.noah-es.com](http://www.noah-es.com).

## Improved Networking Performance

In Noah 4.10, HIMSA updated the network technology for more stable and robust performance. This means more reliable communication with remote offices, especially those with less stable networks.

Export Note

Enter the information in the fields below. This information is required for your data security records and will be stored in Noah and the Noah Activity Log.

## Patient Data Security

In today's world, patient data security is essential. That's why we added a variety of new tools to help make data security as complete and intuitive as possible. These include:

- Active Directory Integration (Windows) login to better control access to Noah System data
- Encryption option for your Noah database
- The ability to encrypt, password-protect and document Noah exports
- Better control of your Noah activity logs

## Fast Data Viewing

HIMSA has added a Fast Data Viewing feature, providing you with immediate access to patient data without opening your Noah modules! By clicking on the eye next to a fitting action for example, you can review instrument settings without having to wait for the fitting module to open! Or click the eye icon to quickly browse the patient's journal entry.

## Easily Merge Duplicate Patient Records

Noah System provides a new merge patient feature, allowing you to easily locate and merge duplicate patient records in your Noah database.

## Patient Categories

Noah System also includes a comprehensive category feature, allowing you to create and assign user-defined patient categories.

A patient's details screen will clearly show the categories to which the patient belongs. And searching, displaying and exporting patients based on categories is easy.

## Noah Mobile Technology

Noah Mobile technology lays a secure ground for communication with Noah compatible apps on mobile devices and in the cloud.

You can already purchase audiometer solutions that take advantage of Noah Mobile technology. And in the future, HIMSA members will use Noah Mobile for questionnaire apps, tele-health applications and more.

*Noah 4.13 is a free upgrade for all registered Noah 4 versions. Visit [www.himsa.com](http://www.himsa.com).*
