

noahES

Secure access to your patient data – anytime, anywhere

Many Noah users have been asking HIMSA for a cloud-enabled solution, accessible anytime, anywhere. That's why we started the Noah ES project.

Noah ES stands for Noah Extended Services and, as the logo implies, the project is to create a cloud-enabled version of Noah. With Noah ES, Noah Services will now reside and be maintained in the cloud, including database backup, maintenance, security monitoring and user authentication.

This provides the following benefits for hearing care businesses:

Accessibility 24x7

Working from home or on the road? Not a problem.

With Noah ES hearing care professionals have access to their Noah patient data 24X7, from anywhere where there is Internet access.

Flexibility

Noah ES supports everything from small businesses to large chains, with customizable access for shops, locations, and concurrent users.

Data Security

Your Noah patient data is securely stored in professionally maintained data centers. The Noah database will be backed up daily and be physically protected from natural disasters and physical theft.

Data Protection

Noah ES is a fully HIPAA and GDPR compliant solution. Your patient data remains your company's patient data; HIMSA and HIMSA member companies will not have any special access to data outside of the normal access that current Noah compatible modules and Apps have today.

Easy Setup

Noah ES is a subscription service - the Noah ES portal makes it easy to set up accounts for your current employees and to add additional accounts as your business grows.

Easy Networking

Networking inside your office and/or between all of your offices will be greatly simplified; no need for setting up specialized networking support (e.g. complicated VPN setups).

No Additional Training Needed

With Noah ES, the Noah System client software will still reside on your PC, and perform in much the same way as it always has. This means no additional training is necessary for your hearing care professionals who already use Noah.
